## Installation Overview

This guide covers the mounting and wiring of the HouseLink HL-10E interface. HouseLink interfaces should be placed indoors.

This symbol means the text has extra importance since it is describing the importance of a feature or explaining a step to which you should pay close attention to avoid problems, or to which safety is a concern.

## Components

A BinTrac system consists of a number of basic components:

### BinTrac Indicator

This is the main unit of the BinTrac system. The BinTrac Indicator communicates with the Smart Summing Boxes to register the weight of feed in the bins and peripheral devices including HouseLink HL-10E. The feed level is computed and displayed on the LED bar graph. One BinTrac Indicator can display up to four feed bins.

### Load Cell Bracket

The Load Cell Bracket allows for easy installation on new or existing bins. Due to the patented design, the bracket does the lifting and there is no need for time consuming field calibration.

### Smart Summing Box

One Smart Summing Box per bin communicates the current reading on the leg brackets to the BinTrac Indicator.

### BinTrac Power Supply

This provides the power for the BinTrac system. The power supply converts the line voltage to low voltage.

### HouseLink Model HL-10E

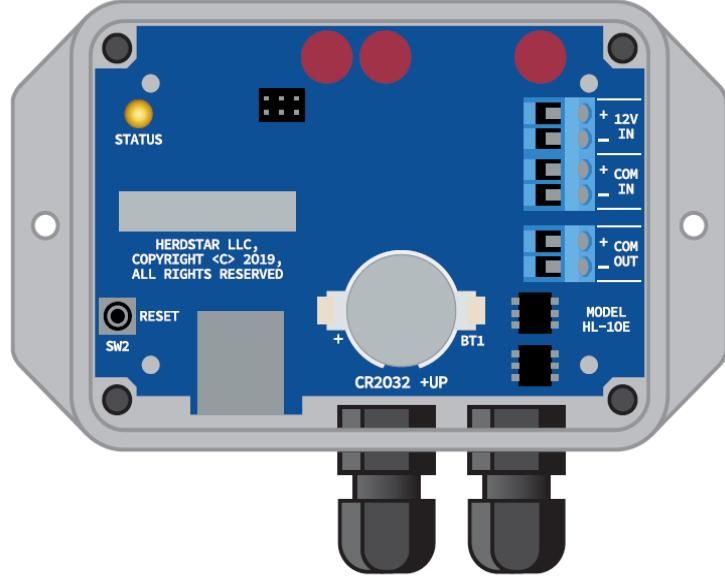

The HouseLink 10E (HL-10E) provides an interface to the BinTrac system via Ethernet utilizing Modbus TCP or XML. Each HL-10E can support up to eight BinTrac Indicators. Rev H hardware must start with software Version 2.00.

## Installation

### Mounting HouseLink HL-10E

**Step 1:** The HouseLink HL-10E should be mounted indoors and away from moisture and debris. Additionally, it should be mounted in or near the peripheral device it is connecting to.

### Wiring the HouseLink HL-10E

HL-10E	BiNTRAC Indicator (COMM Port)
+COM (IN)	+12 SIG
-COM (IN)	-12 SIG
HL-10E	Power Supply
+12V (IN)	+12V
-12V (IN)	-12V
HL-10E	House Control/PLC
Ethernet Port	Ethernet Port

Figure 1

**Step 2:** Connect the +12V (IN) and -12V (IN) on the HL-10E to the provided power supply.

**Step 3:** The +COM (IN) and –COM (IN) on the HL-10E connect to the +SIG and -SIG on the COMM Port of the BiNTRAC Indicator (**Figure 1**). To add multiple BiNTRAC Indicators, connect them to each other on the +SIG and -SIG on the COMM Port (**Figure 2**).

**IMPORTANT** – When connecting multiple BiNTRAC Indicators to the HL-10E, each must be set to a unique ID number. This is configured with the **id** function in the **SETUP** menu of the BiNTRAC Indicator. See the **BiNTRAC BT260/BT200 Operation Manual** for further information on the configuration of the BiNTRAC Indicator.

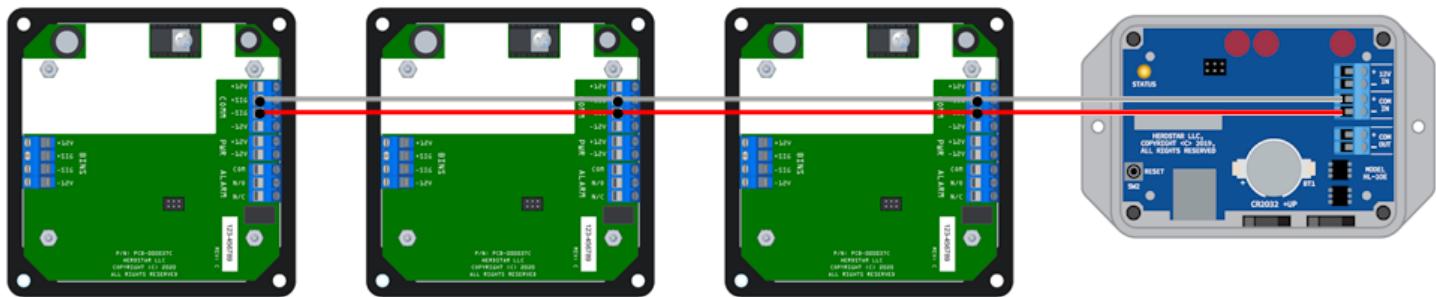

Figure 2

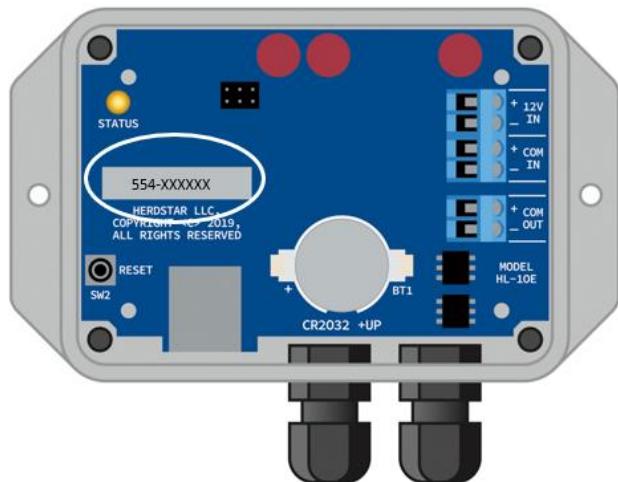

**Step 4:** The Ethernet port will connect to a router, PLC, or other house control using a standard CAT5 Ethernet cable.

**Reset Button:** Pressing and releasing the RESET will put the HL-10E in discovery mode where the device will search for connected BiNTRAC devices. The LED will flash quickly and then return to a slow flash once discovery is complete.

## Setup & Configuration

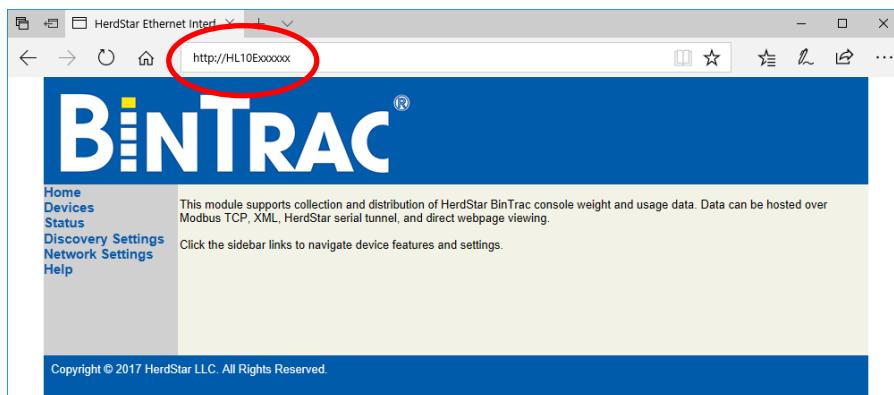

### Initial Setup

1. Connect the HL-10E to a DHCP enabled Local Area Network(LAN).
2. Open a web browser on any device connected to the same LAN as the HL-10E.
3. Type in **http://HL10Exxxxxx/** where “xxxxxx” equals the serial number on the HL-10E that comes after the three-digit date code. (Circled below)

4. Initially, a password is not required, the device will go directly to the Home page. If a password is used, the login screen will pop up, simply enter “admin” for the username and “AAAAAA” as the default password and the device will then display the Home page. See “*Network Settings*” for more information regarding setting the password.

### Home Page

## Devices Page

- Identifies connected devices and current weights of each bin.

The screenshot shows a web browser window titled "172.16.0.1" with the URL "172.16.0.1/devices.shtml". The main content area features the BinTrac logo at the top. Below it is a "Device Summary" section with a table:

Station	Name	Bin A	Bin B	Bin C	Bin D
98	BINTRAC PRO	-32000	-32767	-32767	-32767

On the left side of the page, there is a vertical navigation menu with links: Home, Devices, Status, Discovery Settings, Network Settings, and Help. At the bottom of the page, a blue footer bar contains the text "Copyright © 2017 HerdStar LLC. All Rights Reserved."

## BinTrac Device Page

- Clicking on the individual devices brings up details about each bin such as weights, percentages and the firmware version of the BinTrac Indicator.

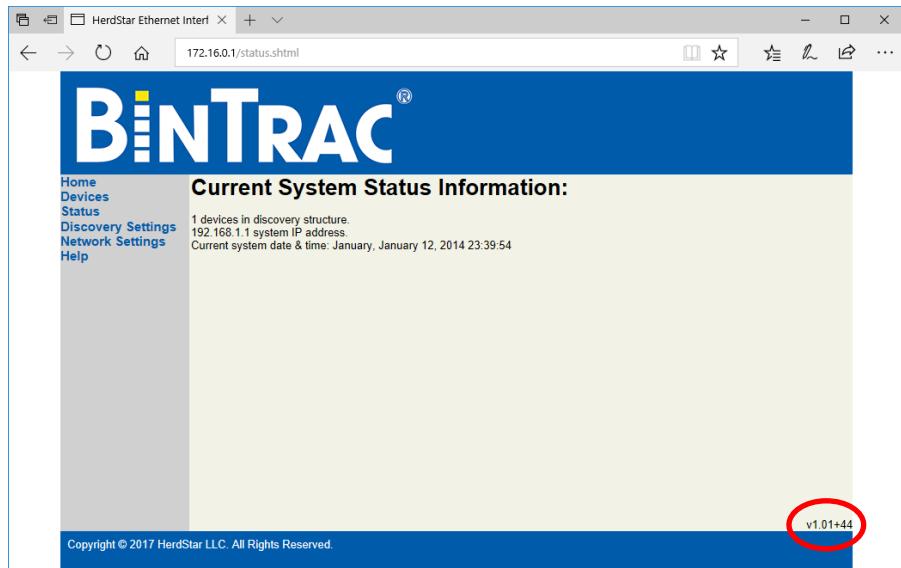

The screenshot shows a web browser window titled "HerdStar Ethernet Interf" with the URL "172.16.0.1/devices.shtml?device=98". The main content area features the BinTrac logo at the top. Below it is a "Device Information" section with a table:

Station	Name	Version	Collected at
98	BINTRAC PRO	E.V3.16.40,	2014/1/12 23:35:51

Below this table are four smaller tables corresponding to Percent A, Weight A, Fills A, and Usage A. Each table has four columns labeled Percent B, Weight B, Fills B, and Usage B respectively. The data for these tables is mostly zeros or empty strings. At the bottom of the page, a blue footer bar contains the text "Copyright © 2017 HerdStar LLC. All Rights Reserved."

## Status Page

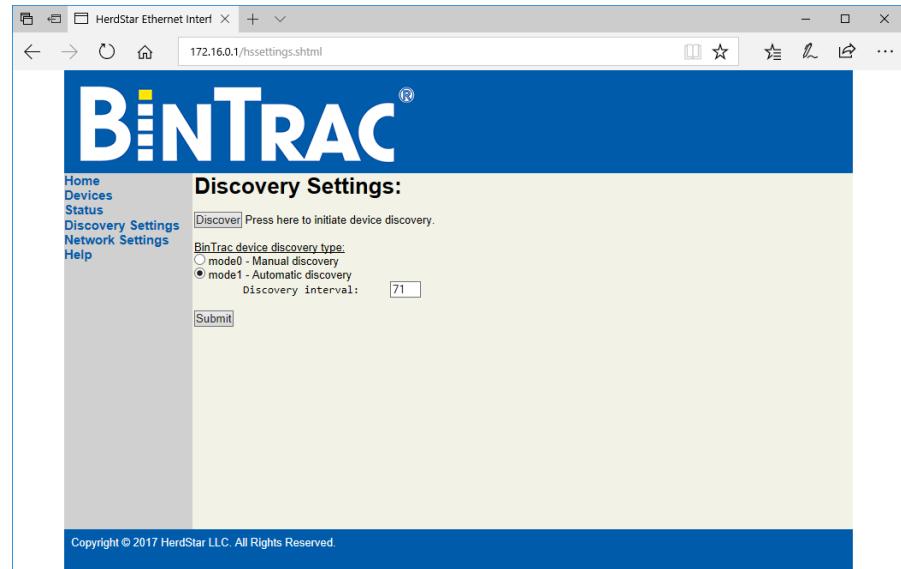

- Identifies the number of BinTrac devices and the IP address of the HL-10E.
- Additionally, the firmware version of the HL-10E device is located in the bottom right corner of this page.

## Discovery Settings Page

The discovery settings page allows you to view and edit your discovery settings.

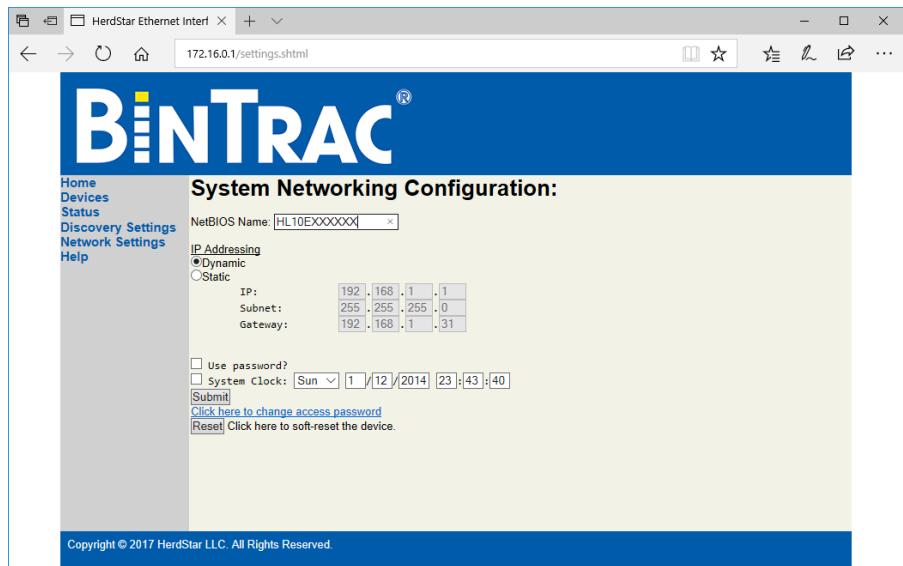

- Press the discovery button to initiate a device discovery. This can also be done by pressing the reset button on the HL-10E device.
- The HL-10E device has an auto discovery feature that can be modified by changing the "Discovery Interval" number (minutes) and pressing the submit button. The auto discovery feature can also be disabled to avoid interruption in situations of consecutive information pulling such as Modbus and XML.

## Network Settings Page

The network settings page displays the current NetBIOS name, dynamic or static IP addressing and the system clock. You may change the IP addressing by selecting “Static” and making the appropriate changes. This page also allows you to adjust the password settings.

- NetBIOS Name:
  - Max 16 characters
  - Must use only uppercase letters
  - Alpha-numeric
  - No special characters
- The static IP address requires the IP address as well as the Subnet Mask and Gateway IP. Changing these can make the device not work so be sure of the changes before pressing submit.
- The system clock can be updated for the current date and time. Adjust the time, check the box and press submit to proceed with the changes.
- A password can be used to protect the access of the HL-10E device. To use this feature, check the “Use password?” box and click submit to apply changes.
- The password can be changed by using the “Click here to change access password” link. Password must NOT exceed 9 characters and contain NO special characters (Alphanumeric characters only).

## Help Page

The Help page can answer some of the more common issues. If you continue to have problems, please call 1-877-BINTRAC for technical assistance.

## XML Interface

The XML interface can be used by developers or advanced users to get detailed information from the BinTrac indicators or set up an automated collection scheme. The XML interface responds to POST requests at the XML generation page found at: <http://HL10Exxxxxx/generateXML.xml>

Query strings can be used to select individual BinTrac indicators which have been properly set up and discovered as follows: <http://HL10Exxxxxx/generateXML.xml?device=22>

The XML interface returns two distinct page types: an index/error page, and a device detail report. See below for example of these pages and short explanations.

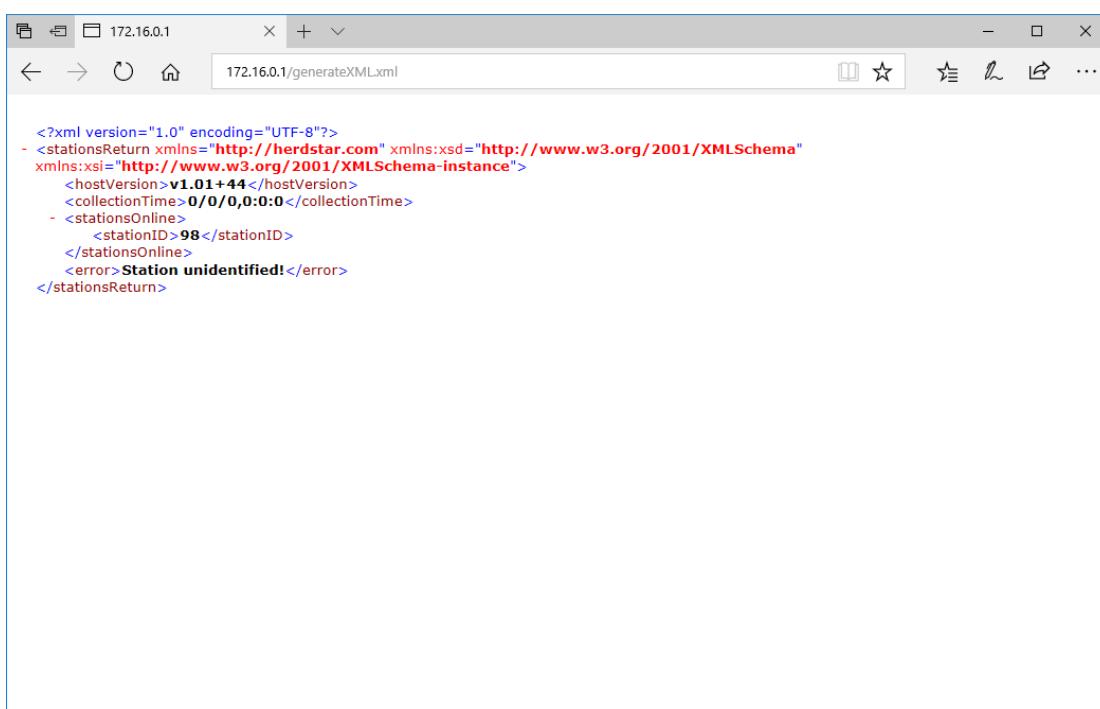

### The Index/Error Page

This page is returned when the XML interface is accessed with no query string, an invalid string, or a query string pointing to a device that is not discovered.

**hostVersion** Indicates the firmware version present on the HL10E device.

**stationsOnline** Returns a list of discovered BinTrac indicators.

**error** Displays “Station unidentified” when a BinTrac indicator isn’t found.

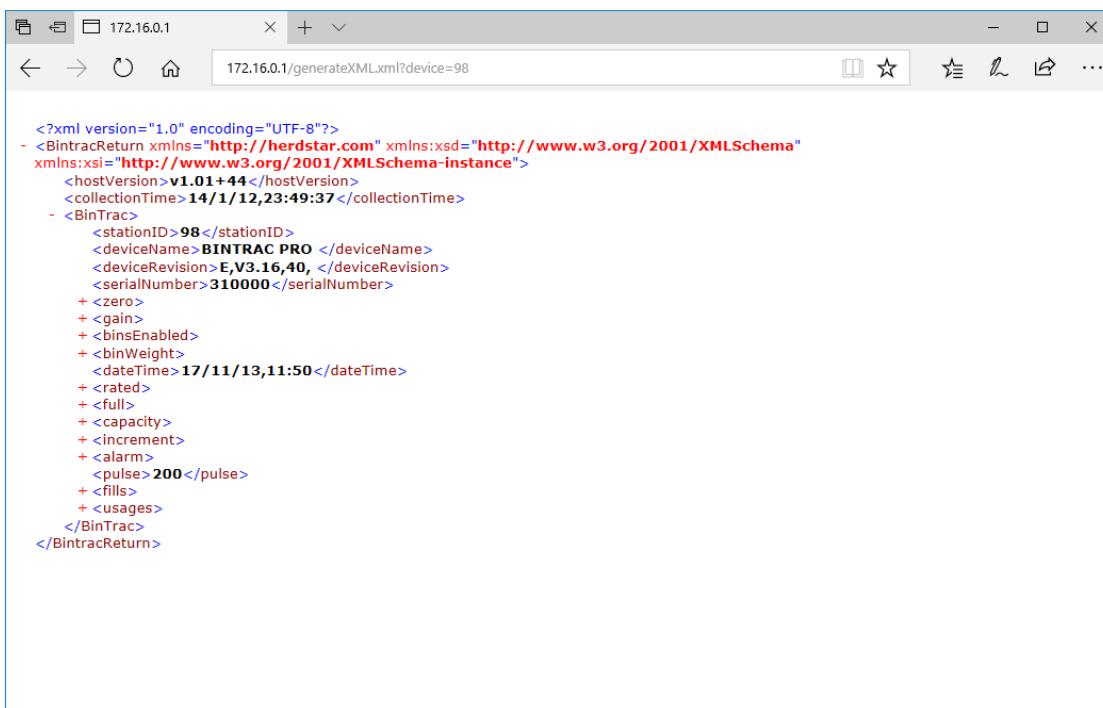

A screenshot of a Microsoft Edge browser window. The address bar shows the URL [172.16.0.1/generateXML.xml](http://172.16.0.1/generateXML.xml). The main content area displays the following XML code:

```
<?xml version="1.0" encoding="UTF-8"?>
<stationsReturn xmlns="http://herdstar.com" xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  xmlns:xs="http://www.w3.org/2001/XMLSchema-instance">
  <hostVersion>v1.01+44</hostVersion>
  <collectionTime>0/0/0,0:0:0</collectionTime>
  - <stationsOnline>
    <stationID>98</stationID>
  </stationsOnline>
  <error>Station unidentified!</error>
</stationsReturn>
```

## The Device Detail Report

This page is returned when the XML interface is provided a valid discovered BinTrac station ID. The page displays internal data and settings from the BinTrac indicator.

<b>stationID</b>	Locally unique identifier.
<b>deviceName</b>	Device name string.
<b>deviceRevision</b>	Device firmware version string.
<b>serialNumber</b>	Factory serial number.
<b>zero</b>	The zero represents the empty weight of the bin.
<b>gain</b>	A value used to scale raw counts to user standard measurement units.
<b>binsEnabled</b>	Lists whether each bin is enabled or not.
<b>binWeight</b>	Bin weight as measured by the BinTrac indicator.
<b>dateTime</b>	Current date and time as configured on the indicator.
<b>rated</b>	mV/V rating setting of for the connected load cells.
<b>full</b>	User value defining the weight that a bin is considered to be full.
<b>capacity</b>	Specified load cell capacity sum.
<b>increment</b>	Smallest units that the BinTrac display will count by.
<b>alarm</b>	A user defined weight value to flip a relay output.
<b>pulse</b>	If a pulse output is enabled, this value holds the number of pulses per unit weight.
<b>fills</b>	Timestamped fill weight data.
<b>usages</b>	Timestamped usage weight data.

The screenshot shows a web browser window with the URL `172.16.0.1/generateXMLxml?device=98`. The page content is an XML document representing the device detail report. The XML structure includes a root element `<?xml version="1.0" encoding="UTF-8"?>`, followed by a `<BintracReturn>` element with attributes `xmlns="http://herdstar.com"` and `xmlns:xsd="http://www.w3.org/2001/XMLSchema"`. Inside `<BintracReturn>`, there are nested elements for hostVersion (`v1.01+44`), collectionTime (`14/1/12,23:49:37`), and a `<BinTrac>` element. The `<BinTrac>` element contains the following data:

```

<stationID>98</stationID>
<deviceName>BINTRAC PRO</deviceName>
<deviceRevision>E,V3.16,40</deviceRevision>
<serialNumber>310000</serialNumber>
+ <zero>
+ <gain>
+ <binsEnabled>
+ <binWeight>
<dateTime>17/11/13,11:50</dateTime>
+ <rated>
+ <full>
+ <capacity>
+ <increment>
+ <alarm>
<pulse>200</pulse>
+ <fills>
+ <usages>
</BinTrac>
</BintracReturn>

```

## Modbus Packet Data Format

The Modbus module responds to an input register point type (4), at address 1000 with a length of eight bytes. Individual bin addresses are as shown below. The Modbus device ID will match to the BinTrac Indicator station ID as configured in the setup menu of the BinTrac indicator. A discovery must be done before any units will respond.

### Bin A

Address:	1000	Device Id:	1
MODBUS Point Type			
Length:	2	04: INPUT REGISTER	<input type="button" value="▼"/>

### Bin B

Address:	1002	Device Id:	1
MODBUS Point Type			
Length:	2	04: INPUT REGISTER	<input type="button" value="▼"/>

### Bin C

Address:	1004	Device Id:	1
MODBUS Point Type			
Length:	2	04: INPUT REGISTER	<input type="button" value="▼"/>

### Bin D

Address:	1006	Device Id:	1
MODBUS Point Type			
Length:	2	04: INPUT REGISTER	<input type="button" value="▼"/>

### All Bins

Address:	1000	Device Id:	1
MODBUS Point Type			
Length:	8	04: INPUT REGISTER	<input type="button" value="▼"/>

Below are sample Modbus request and response packets:

### **Sample Modbus Weight Request**

## Operational Specifications

<b>Operating Temperature Range:</b>	-40°C to +60°C (-40°F to +140°F)
<b>Humidity:</b>	5% to 95% (non-condensing)
<b>Environmental Air:</b>	No corrosive gasses permitted
<b>Shock and Vibration:</b>	Suitable for installation on stable surfaces
<b>Enclosure Type:</b>	Unsealed
<b>Agency Approvals:</b>	N/A
<b>Wiring Type:</b>	Screw terminal blocks plus RJ45 jack
<b>Power Requirements:</b>	10.5VDC – 13.5VDC, 160mA (typ @ 12.0VDC) (Current depends on port loading)
<b>Serial Flash Memory:</b>	16Mb
<b>Real-Time Clock/Calendar:</b>	Present
<b>Ethernet Communication Port:</b>	Single 10/100 Base-T with status indicators
<b>COM IN/OUT Serial Communication Interfaces:</b>	HerdStar optically isolated (proprietary)
